

SOLAR LIGHT BOLLARD MAINTENANCE INSTRUCTIONS

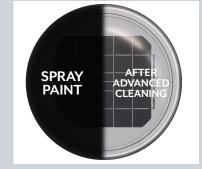

12 MONTHS ANNUAL MAINTENANCE (6 MONTHS FOR MINE SITES OR HARSH ENVIRONMENTS)

- Use plenty of clean water to wash/rinse off any dust, grit and contaminants from light head.
- (2) Use only a soft very wet non-textured cloth and "do not" use a circular motion – only side-to- side or up-and-down motions. Try to do the same direction every wash.
- 3 Wipe dry with a soft non-textured cloth lightly.
- 4 Allow the surface to dry before polishing.
- (5) Apply a small amount (thumbnail size) of Meguiar's PLASTX (available at most automotive stores) or similar polycarbonate polish to the dome top.
- 6 Polish with a very soft non-textured clean cloth (or powered polisher/buff with soft material or foam pad) the top dome surface.
- Again, use side-to-side or up-and-down motions. Try to do the same direction every polish.
- 8 Wipe clean with a soft non-textured cloth after polishing
- If possible or available within your region, spray with VuPlex or Plexus (shake can well before use) a light mist covering all clear polycarbonate surfaces after polishing to create an anti-static non-stick finish and protective layer and polish dry with a soft non-textured cloth.

ADVANCED CLEANING PROCESS

Cleaning of: Spray Paint, Markers and all other acidic ink and adhesive contaminants.

- Apply Ethanol (Industrial Pure Alcohol) onto fine-textured soft fabric cloth and scrub off stains with pressure "DO NOT" use a circular motion – only side-to-side or up-and-down motions until all acidic or adhesive contaminants are removed.
- Wash with a tiny amount of soft-soap or even dishwasher liquid but limit it to a couple of drops in a full bucket.
- 3 Rinse with clean water and dry with non-textured soft fabric cloth.
- (4) Then follow above steps 3 to 9 under Annual Maintenance Process preferably using a powered polisher/buff to get a cleaner clear finish.

PLEASE NOTE:

- Spray paint and other acidic liquids will slowly oxidise and weaken PC surfaces.
- The advanced cleaning process must be done immediately when this occurrence has been discovered.
- The advanced cleaning process may not restore 100% due to the PC surface having already been damaged by acidic materials.
